

*High Pressure Spray Guns*

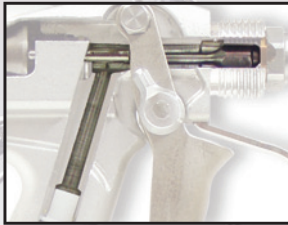

# *Section 02*

## PROFESSIONAL AIRLESS SPRAY GUN

### Large Fluid Passages

Over sized fluid passages and a streamlined valve stem offer for less restriction than competitive guns. This reduces build up of paint inside and allows for a positive shut off with every trigger pull.

### No Adjustments...Ever!

Calibrated spring and valve system. The trigger spring has been perfectly calibrated to provide the least resistance as possible and still give you complete control while spraying. And, the entire valve assembly never needs adjustments - even when you rebuild it.

### Lightweight Aluminum Alloy

The exclusive one piece handle is forged from the highest quality treated aluminum alloy then hand polished and treated with bright dip anodizing for long life even in severe conditions. When you hold the Q300 for the first time and feel how light and well balanced it is, you'll decide for yourself that this is the gun you want to use everyday - now and for years to come!

The patented design of the exclusive one-piece handle design is much safer because there are no connections between the handle and head that could potentially leak. This also allows for the most comfortable handle in the industry that also reduces fatigue and increases control.

### Easy Filter Access

The filter on the Q300 is easily accessed by simply unscrewing the swivel from the bottom of the handle. Nothing else needs to be attached or taken apart. Now you can clean and change your filter quickly without any adjustments to the rest of the gun.

### Ladder and Scaffold Hook

The patented ladder and scaffold hook that comes standard on the Q300 finally gives you a way to hang your gun up when it's not in use. No more laying it on the ground where it can get damaged! This removable hook has been designed to fit on most ladder rungs and scaffold rails.

### Better Hose Connection Design

The Q300 has extra space between the two nuts on the swivel to make connecting your hose easier.

### 4200 psi = 15% more working pressure

All components on the Q300 are designed to work under higher pressure that other guns on the market. The aluminum alloy handle, the stainless steel and tungsten carbide valve assembly and the stainless steel hose swivel are all precision forged and machined for reliable performance, day in and day out. You can depend on it.

Q300 PROFESSIONAL AIRLESS SPRAY GUN

- High quality, durable spray gun for virtually all applications.
- Lightweight, only 500g
- Light trigger action for all day comfort
- 1 piece handle design offers superior, outstanding comfort and safety.
- Easy access to repair.
- Quick filter change access.
- Available in 7/8" or 11/16" diffuser.
- Available in 4 or 2 finger trigger options.
- Supplied complete with removable ladder hook
- Supplied as standard with 1/4" BSP swivel. Other swivels available including 16x1.5, 1/4" NPS

4 Finger Trigger with Tip and Guard

## AUTOMATIC AIRLESS SPRAY GUNS

### K81 ASTURO AUTOMATIC AIRLESS GUN

- Suitable for high viscosity materials
- Precise control of fan width and gun travel speed
- Spring loaded piston
- Anodized forged aluminium body
- Tungsten carbide ball valve and seat
- Stainless steel 1/4" and 3/8" fluid inlet
- Durable robust construction

Code: B-108100

## AUTOMATIC AIR ASSISTED AIRLESS SPRAY GUNS

### ASP 2001 ASTURO MIX AUTOMATIC AIR ASSISTED AIRLESS

- Designed to provide superior finish quality
- Lightweight and extremely easy to install
- Removable spray head allowing servicing to be undertaken without changing the gun's mounting or disconnecting any hose
- Very high transfer efficiency greatly reduces overspray
- Manufactured with tungsten carbide ball seat and fluid needle ball, Teflon packings and seals
- Unique instantaneous activation and shut off time providing excellent finish quality

Code: B-29605

MAX. PRESSURE  
250 bar / 3550 psi

WEIGHT

## OPTIMA 2000 AIR ASSISTED MANUAL SPRAY GUN

- Professional Air Combi air assisted airless technique
- Adjustable trigger pressure from 80-250 bar
- Separate regulations for round and flat jet
- Adjustable teflon needle sealing
- Swivel air and paint connections
- Optimum centre of gravity
- Operates at pressures up to 50% lower than conventional airless systems
